A Report of Data Collected and Publications Resulting from the Research Cruises
of The Geronimo and Undaunted in the Tropical Atlantic Ocean, 1963-1969.

Joseph E. Tashiro

Introduction

The research vessels Geronimo and Undaunted, based in Miami, Florida between 1963 and 1970, were used to conduct fishery and oceanographic investigations in the tropical Atlantic Ocean. During 27 research cruises the two vessels logged over 1,500 days and 200,000 miles. The staff of the Miami Laboratory ^{1/} frequently receives inquiries for information concerning these cruises. Most inquiries are for station data-- the dates, times, and geographic positions of each observation and collection. This report was compiled to help answer these inquiries and to provide researchers with a reference to station data of Geronimo and Undaunted cruises. Additional data may be obtained from Environmental Data and Information Service ^{2/}.

Cruises by each vessel are listed chronologically in Table 1, and the general geographic areas of cruises are shown in Figures 1, and 2. Station data for cruises are listed in Appendix 1, and publications based on, or mentioning Geronimo or Undaunted data are shown in Appendix 2. No station data were found for seven vessel and equipment test cruises.

1/ Southeast Fisheries Center, Miami Laboratory, National Marine Fisheries Service, NOAA, Miami, FL 33149. Formerly the Bureau of Commercial Fisheries (BCF), Tropical Atlantic Biological Laboratory (TABL), Miami, Florida and the BCF Biological Laboratory, Washington, DC.

Research Vessels and Cruises

The descriptions of the research vessels Geronimo and Undaunted and summaries of their major cruises and missions are found in a report by Weeks (1970). The following are selected excerpts.

"The two BCF vessels assigned to investigations of the tropical Atlantic Ocean--the Undaunted and the Geronimo--have logged, in total time and distance, 1,557 days and about 200,000 miles on 27 research cruises.

The Geronimo was commissioned as a BCF research vessel in 1963 and worked for the tropical Atlantic program out of Washington, D.C., then Miami, from that year until mid-1966, when she was transferred to the BCF Biological Laboratory at Galveston, Tex. The vessel spent 657 days at sea and traveled about 85,000 miles on eight cruises in the tropical Atlantic.

Originally commissioned in 1944 as an ATA-class (seagoing) Navy tug, the Undaunted was converted to a BCF research vessel in 1965. The Undaunted is 143 feet long, with a 34-foot beam and a 12-foot draft; speed is 10 to 12 knots, and cruising range is about 5,000 miles. The ship is equipped for live-bait fishing and for bottom and upper-level trawling, as well as for oceanographic observations at varying depths. She carries an STD (salinity-temperature-depth) system (2,187-fathom capability) for measuring characteristics of sea water, a 25-channel data acquisition system, and an automatic picture-transmission receiver for use with space satellites on broad scale oceanography. Aboard the vessel are: laboratories for chemical analysis, general biology, and electronic equipment; a live-bait tank capable of holding 2,000 pounds of fish; and two single sideband radio transmitters for contact with the home laboratory's radio station and for rapid transmission of data from ship to shore. Quarters include six state rooms for scientists and nine cabins for crew members--total accomodations for 25 people.

By mid-1969, the Undaunted had spent almost 900 days at sea and traveled 115,000 miles on 19 research cruises for TABL and for 4 other laboratories. She has touched ports in Bermuda and the Bahamas, in many Caribbean areas, in South America, Africa, and in the Pacific. Almost all of 1968 was spent in waters off west Africa on two cruises; in spring of 1969 the Undaunted joined the BOMEX (Barbados Oceanographic and Meterological Expedition) flotilla in the West Indies to participate in the 2-month environmental study of air-sea interaction in cooperation with a number of other Government agencies.

The following condensed cruise reports portray the wide variety of data gathered on laboratory cruises. Minor shakedown or equipment testing cruises are not listed.

3/

GE (Geronimo) Cruise 2, July - October 1963.--Participant in Equalant II expedition to the Gulf of Guinea, off western Africa. Oceanographic and biological stations were occupied offshore from Cape Three Points (Ghana) south to the mouth of the Congo River. In cooperation with the Guinean Trawling Survey, the ship trawled the bottom on the Continental Shelf between Cape Lopez and Pointe Noire. It searched for pelagic fish along the Continental Shelf between Cape Three Points, Ghana, and Cape Palmas, Liberia; scattered schools of small yellow-fin tuna were seen but abundance was not great. A seamount was discovered at lat $14^{\circ} 38' S$, long $5^{\circ} 13' E$, and its height was 1,300 fathoms above the ocean floor and 1,000 fathoms beneath the surface. For the first time oceanographic data were transmitted via Syncram satellite to the NODC (National Oceanographic Data Center), Washington, D.C., as a means of measuring quality control, and corrections were received by the vessel within 45 minutes.

3' The first 6 cruises of the Geronimo were for BCF Biological Laboratory, Washington, D.C., which later became TABL.

GE Cruise 3, January-May 1964.--Participant in Equalant III to the Gulf of Guinea. Tuna schools found near Cape Palmas and Cape Three Points were judged to be associated with interaction between the easterly flowing Guinea Current and the configuration of the two cape areas. Physicochemical observations included 120 hydrographic casts to 547 fathoms; 73 observations of primary productivity and zooplankton biomass were made; a variety of methods was used to take 391 biological samplings; fish were caught and sampled from 47 schools of surface-swimming yellowfin and skipjack tunas. Sea birds were collected for the U.S. National Museum. Records were kept of bathymetric and meterological conditions.

GE Cruise 4, July-November 1964.--Gulf of Guinea. Two separate tuna surveys were undertaken but, because the "cold" season was underway in the Gulf, fish sightings (baitfish and tuna) were sparse. Only 51 schools of tuna were seen, from which 147 fish were sampled. Ocean current measurements were taken, including consistent observations of the Guinea Undercurrent flowing beneath the Guinea Current; 44 plankton tows were made--in one series, well over one thousand scombrid juveniles and larvae were taken per tow. Enroute to West Africa, personnel took productivity and bacteriological samples in the Sargasso Sea. Bathymetric and meterological observations were made. Field training of technical personnel and testing of new equipment were accomplished during the cruise.

GE Cruise 5, January-May 1965.--Gulf of Guinea. Two tuna surveys were made, the first off the coast of Sierra Leone and Liberia, the second south of Ghana and Togo. Skipjack and small yellowfin tunas were caught and sampled from 16 of 84 schools sighted on the first survey, and from 23 of 137 schools observed on the second survey. Direct current measurement and a survey of

oscillations in the Atlantic equatorial undercurrent were undertaken. Environmental studies sought to determine the relation between concentrations of tuna and the Mauritanian to Sierra Leone oceanic front--seemingly the boundary between cold, recently upwelled water to the north and warmer water to the south--previously detected off the coast from Senegal to Liberia. Bathymetric and meteorological records were kept.

GE Cruise 6, July-November 1965.--Western Atlantic Ocean adjacent to Lesser Antilles and the Caribbean Sea. Stocks of surface tunas and other pelagic predators, and baitfish for tuna fishing were the objects of the research. Abundant quantities of herring, sardines, and anchovies were seen along the southeastern coast of the United States, around Puerto Rico south to Trinidad and Venezuela, and in other coastal regions of the Caribbean. The thread herring proved the hardiest of the baitfishes caught. Forty-four tuna schools were sighted, from which 48 fish -yellowfin, skipjack, blackfin, and little tuna were caught. Though few surface schools of tuna in commercial quantity were sighted, two incidents were noteworthy: While running through the New Providence Channel in the Bahamas, the vessel passed through what appeared to be an enormous concentration of large fish (judged by sounds made as they leaped at the surface) for 2½ hours; and at lat 12°N, long 65°W, big schools of good-sized yellowfin and skipjack tunas were seen in quantities estimated at 80 to 100 tons. Oceanographic observations also were made throughout the cruise.

GE Cruise 7, January-April 1966.--Northeast coast of South American and the eastern Caribbean Sea. Investigation of surface tunas, other pelagic predators, and baitfish formed the major part of the schedule, but an added aspect was the testing of procedures in which uncorrected oceanographic data were sent to shore stations in the United States, processed, and returned to

the vessel. Fishing was poor around Trinidad and Brazil during the first leg of the cruise because of rough weather, but fair to good in the southern Caribbean on the second leg. Two-to three-ton schools of blackfin tuna were sighted near Caracas in late March; waters off Anguilla (the Leeward Islands) had plentiful schools of yellowfin and skipjack tunas. Numerous baleen whales were seen in the same area. To determine time-space changes in distribution of eddies, an intensive grid of bathythermographic, hydrographic, and biological stations was occupied in a 550-square-mile stretch on the western side of the Lesser Antilles. Preliminary analysis of the distribution of temperature suggested that the eddies might be permanent features that act as mechanisms for biological enrichment. Two new duties were added to the ordinary procedures used to collect oceanographic and biological samples--blood samples were taken from 100 tunas for serological analysis at the BCF Biological Laboratory at Honolulu, and tissue samples were collected for study of possible insecticide concentrations at the BCF Biological Laboratory at Gulf Breeze, Fla. The original cruise track was interrupted in April so the Geronimo could join the Undaunted in waters off St. Vincent Island (the Windward Islands), where extremely large schools of tunas had been located.

GE Cruise 8, June 1966.--Off Bimini, the Bahamas. TABL joined with the BCF exploratory base at Pascagoula, the Woods Hole Oceanographic Institution, IMS, and the International Game Fish Association in a cooperative study of bluefin tunas. The study coincided with the 1966 Bluefin Tuna Tournament. Although shortened because of a hurricane threat, the cruise gathered considerable amounts of oceanographic and biological data.

UN (Undaunted) Cruise 2, February-April 1966--Western Atlantic Ocean adjacent to the Lesser Antilles and the Caribbean Sea. Of 44 tuna schools

observed, 18 were fished and 508 fish were brought aboard. The highest percentage of the catch was skipjack tuna, but yellowfin tuna and dolphin were also present. Most of the tuna schools were sighted between the islands of Martinique and Trinidad, and enormous schools of skipjack and yellowfin tunas were seen immediately west of St. Vincent Island. Observers were impressed with the generally large sizes of the fish (10-160 lbs) and of the schools (some estimated at 200-300 tons each), the presence of the schools in a region not generally considered productive, and the fact that the tunas remained for more than a week in the one area. A spotter plane accompanied the Undaunted for a month. Dense schools of small sea-basses (creole-fish) were seen near the tuna schools and also were found in tuna stomachs, and abundant quantities of sardines were sighted. Water properties on the eastern and on the western sides of the Lesser Antilles differed significantly. On the western side of St. Vincent Island, where tunas were schooling, turbulent eddies in the upper 164 fathoms apparently increased the supply of plankton in the upper mixed layer. Forage organisms were collected by net tows and night lights; oceanographic measurements were made to depths of 273 fathoms; and meteorological conditions were recorded.

UN Cruise 3, May 1966.--Between Bermuda and Miami. Adults and larvae of midwater fishes were collected, as were specimens of deepsea angler fish.

UN Cruise 4, June 1966.--The Florida Straits off Key West, Fla. Oceanographic investigation was concentrated on efforts to determine whether a turbidity layer 150-ft. thick at depths of 650 to 900 ft. contained iron-bearing constituents. The newly installed salinity-temperature-depth apparatus was studied, calibrated, and tested.

UN Cruise 5, July-November 1966.--The West Indies to coastal waters of Brazil. Added to regular investigations of pelagic and bait-fishes and study of oceanographic features was the collection of fish from previously under-sampled areas of zoogeographic importance.

For a substantial portion of the cruise severe weather impeded investigations, particularly the catching of pelagic fish. Between Trinidad and Rio de Janeiro, only 28 schools of tuna were sighted, most of them yellowfin and skipjack tunas. Near St. Vincent and St. Lucia Islands, concentrations of skipjack and yellowfin tunas again were seen on the Caribbean side of the islands. Phytoplankton and zooplankton were abundant in the region. Baitfish (sardines and herring) were caught in good quantities at Port of Spain, Trinidad. Numerous marine specimens were gathered near Atol das Rocas and Fernando de Noronha (lat 4° S), including individuals from 26 families, and a new species of pomacentrid fish was discovered among the samples.

UN Cruise 6701, ^{4/}February-March 1967.--Southern Lesser Antilles (St. Vincent Island area), the north coast of Venezuela, and the southern Bahamas. Sightings of skipjack and yellowfin tunas again were made off St. Vincent Island; schools were estimated to range from 4 to 200 tons each. Baitfish were plentiful at Trinidad--200 scoops (200-300 fish per scoop) of anchovies were taken with little trouble on night-baiting sets--but not abundant in other regions. Several tuna schools were seen in the southern Bahamas, enough to suggest to observers that a commercial resource might exist in the region during early months of the year. About 250 yellowfin, skipjack, and blackfin tunas were caught and sampled.

^{4/}Cruise numbering system changed in 1967

UN Cruise 6702, March 1967.-- Florida Straits and Cay Sal (Bahamas)
Bank. The brief cruise to collect larval and juvenile fishes was noteworthy because a fish spotter made two air surveys in conjunction with surface studies from the vessel, and because guest biologists from the University of Miami collected reptiles on Elbow Cay, the Bahamas--an unusual activity for a marine research cruise. Observers saw no tunas on the first air survey; on the second flight, they spotted tunas in the southern Bahamas. The herpetologists captured 36 reptiles, mostly lizards.

UN Cruise 6703, March-May 1967.--Western Caribbean between the Yucatan Channel and Colombia. Standard biological and oceanographic investigations were made and the fish fauna in the Gulf of Honduras was investigated by means of bottom trawling, beach seining, and skin diving. Thirty-four tuna (blackfin, skipjack, and little tuna) were caught from 13 schools spotted off British Honduras, Panama, and Nicaragua. Tunas ranged from 3 to 8 lbs, and schools sighted (mostly blackfin tuna) were estimated at 2 to 20 tons. Various oceanographic observations were scheduled throughout the cruise. A large assortment of fishes (more than 400 gallons of 300 species) was collected in the Gulf of Honduras, and 75 of the species were new to the TABL fish collection. Baitfish (primarily pilchards) were located in plentiful quantities at Porto Bello, Panama, and at Bonacca Island, Honduras. An incidental piece of intelligence volunteered by Honduran shrimp fishermen indicated that large Laurentian scallops were present in commercial quantities--2 bushels per 30-minute trawl by small trynet--off Caratasca, Honduras.

UN Cruise 6801, January-May 1968.--Coast of western Africa, Sierra

Leone to South-West Africa. One of the principal assignments was the investigation of the distribution of tunas in the Gulf of Guinea and off Angola in relation to the oceanographic feature called the Berrit Front. Collecting of benthic fishes and invertebrates from the Continental Shelf was an added duty. Tuna fishing by trolling and live bait was excellent throughout most of the cruise. Eighty-eight tuna schools were sighted or otherwise detected, and 538 skipjack tuna and 195 yellowfin tuna were caught. Tunas were particularly abundant around Sao Tome (off Gabon), as were whales and birds. Most of the larger skipjack tuna sampled (6-8 lbs.) in April in the Sao Tome region were in advanced stages of maturity--sampling revealed that ovaries contained large clear eggs with well-defined oil globules and the testes extruded milt. Most schools sighted appeared suitable for purse seining, though many of the skipjack tunas seen in the schools fell short of the size (over 4 lbs.) preferred by U.S. tuna boats. No commercial tuna boats were seen on the cruise. Ample quantities of several different kinds of baitfish were present in Lobito Harbor and at Cape Ledo, Angola. The many-faceted survey of the Berrit Front confirmed the findings of other workers: Plots of surface temperature revealed that the front was shaped in the form of a reversed "S," with the upper point of the S positioned northwest of the lower, or most southerly end, which was close to the Baia dos Tigres, Angola. On trawling transects, 75 gallons of fish were caught and preserved for later study; crustaceans and other invertebrates were given to specialists working on African species. An unusual catch was 30 juvenile billfishes. Commercial fishermen in Angola contributed two rare fishes to the TABL collection--

a frilled shark and a large ratfish. Conferences were held aboard the vessel with a number of fishery experts from several African and European nations.

UN Cruise 6802, August-December 1968.--A four-phase survey of the coast of western Africa from the equator south to Angola, in cooperation with the U.S. Coast Guard's Rockaway and the research vessel, Goa, working for the Missao de Estudos Bioceanologicos de Pescas, Angola. In addition to an investigation of the oceanography and the distribution of tunas, the cruise plan called for the study of the physical and biological characteristics of the Gabon-Angola front. Movement of the front, its definition by specific isotherms, and the association of tunas with the front were parts of the study. Skipjack tuna were predominant in the 125 schools observed, but some schools were made up of yellowfin tuna, which generally were found in waters warmer than 23°C . (skipjack tuna were found in waters as cool as 20° C). With few exceptions, tuna schools were limited to stretches some 30 to 90 miles off the coast; the inshore zone and the zone investigated outside the 90-mile demarcation line were nearly devoid of tuna. A total of 671 were caught and sampled aboard the Undaunted. French, Portuguese, United States, and Canadian vessels engaged in surface fishery for tunas in the same period covered by the cruise appeared to confine their fishing to the same 30- to 90-mile grounds, from south of Cape Lopez (lat. 1° S) to the Benguela region of Angola (13° S). No commercial vessels were seen during a 2-day passage of the Undaunted from Luanda to Abidjan, during which 15 large schools of skipjack tuna and 2 schools of yellowfin tuna were sighted moving in a S to SE direction under large bird flocks. The Gabon-Angola front (warm surface water) appeared to move southward during the cruise from southwest of Cape Lopez (lat. 1° S) to

off Santa Marta (14° S), a distance of about 720 miles, in about 53 days (average speed, 13.6 miles per day). The advancing mass of warm water (24° C or higher) seemed to be in a layer about 10 fathoms thick, tapering to less than half a fathom thick on its advancing edge. Thermocline depths were shallow (average 5 to 8 fathoms) throughout the study area. Photographs (125) received aboard the Undaunted from the ESSA-6 satellite revealed, disappointingly, no detectable relation between cloud formation and the Gabon-Angola front.

UN Cruise 6903, June-August 1969.--Southern Lesser Antilles, as part of BOMEX, a task force of ships, aircraft, buoys, and satellites investigating 90,000 square miles (nautical) of the tropical Atlantic.

The dynamics and physical and biological characteristics of eddy fields west of St. Vincent, St. Lucia, and the Grenadine Banks were investigated. Biological observations included plankton tows, midwater trawls, reef collections, plant pigment, and productivity studies."

APPENDIX 1 (continued)

GERONIMO CRUISE 2

July 8 to October 9, 1963

OBSERVATION CODES

BDM	- Bottom depth, meters
GMT	- Greenwich Mean Time
HYDRO	- Hydrographic
ICITA NET	- Plankton net
Z	- Time zone

APPENDIX 1 (continued)

GERONIMO CRUISE 3

January 19 to April 20, 1964

OBSERVATION CODES

BDM	- Bottom depth, meters
C-B NET	- Clarke-Bumpus net
D-D SAMPLER	- Discrete-depth sampler
GMT	- Greenwich Mean Time
HYDRO	- Hydrographic
ICITA NET	- Plankton net

APPENDIX 1 (continued)

GERONIMO CRUISE 4

July 14 to November 2, 1964

OBSERVATION CODES

B	- Bait collection
BT	- Bathythermograph
CB	- Clarke-Bumpus net
D	- Drogue
F	- Fishing
GMT	- Greenwich Mean Time
H	- Hydrographic
MN	- One-meter diameter plankton net
NL	- Night light
NN	- Neuston net
P	- Productivity
STD	- Salinity, temperature, depth

APPENDIX 1 (continued)

GERONIMO CRUISE 5

January 22 to April 26, 1965

OBSERVATION CODES

B	- Bait collection
BT	- Bathythermograph
CB	- Clarke-Bumpus net
D	- Drogue
F	- Fishing
GMT	- Greenwich Mean Time
H	- Hydrographic
MN	- One meter diameter plankton net
NL	- Night light
NN	- Neuston net
P	- Productivity
STD	- Salinity, Temperature, Depth

APPENDIX 1 (continued)

UNDAUNTED CRUISE 6701

February 3 to March 5, 1967

OBSERVATION CODES

BDM	- Bottom depth, meters
GMT	- Greenwich Mean Time
HYDRO	- Hydrographic
ICITA NET	- Plankton net
Z	- Time zone

APPENDIX 1 (continued)

UNDAUNTED CRUISE 6703

March 31 to May 23, 1967

OBSERVATION CODES

BT	- Bathythermograph
GMT	- Greenwich Mean Time
HYDRO	- Hydrographic
ICITA NET	- Plankton net
STD	- Salinity, temperature, depth
Z	- Time zone

APPENDIX 1 (continued)

UNDAUNTED CRUISE 6903

June 19 to August 10, 1969

OBSERVATION CODES

DB	- Drift bottle
MISC FISH	- Miscellaneous fishing
NL	- Night light
P	- Productivity
PHYTO	- Phytoplankton
PP	- Plant pigment
R	- Rosette sampler
STD-BT	- STD and bathythermograph
STD-H	- STD and hydrographic
XBT	- Expendable BT
ZF	- Zooplankton-Forage

APPENDIX 2.
PUBLICATION LIST

ANDERSON, W. D. Jr.

1970. Revision of the genus Sympysanodon (Pisces; Lutjanidae) with descriptions of four new species. Fish. Bull. 68(2):325-346.

AUSTIN, T. S.

1963. Equalant. Am. Inst. Biol. Sci. Bull. 13(5):46-48.

AUSTIN, T. S.

1963. Equalant II, a mid-summer "photograph" of the oceanographic conditions, tropical Atlantic Ocean. Proc 16th Annu. Sess. Gulf. Caribb. Fish. Inst. 142-143.

AUSTIN, T. S.

1965. Seasonal differences of zonal temperature anomalies in the upper layers of the eastern tropical Atlantic Ocean. Int. Conf. Trop. Oceanog., Miami, Florida, Nov. 17-24.

AUSTIN, T. S.

1965. Atlantic Ocean. McGraw-Hill Yearbook Science and Technology:113-116.

AUSTIN, T. S., and J. L. CHAMBERLIN.

1963. Biological Laboratory, Washington, D. C. Am. Zool. 3(3):380-381.

BEARDSLEY, G. L. Jr.

1969. Distribution and apparent abundance of the yellowfin tuna (Thunnus albacares) in the eastern tropical Atlantic in relation to oceanographic features. Bull. Mar. Sci. 19(1):45-56.

BEARDLSEY, G. L. Jr.

1969. New Atlantic tuna fishery. Sea Front. 15(3):152-159.

BEARDSLEY, G. L. Jr.

1970. The Atlantic albacore fishery. Commer. Fish. Rev. 32(6):41-45.

BEARDSLEY, G. L., and D. C. SIMMONS.

1971. A bibliography of the blackfin tuna Thunnus atlanticus (Lesson). NOAA Tech. Rep. NMFS SSRF-635:10.

BERRY, F. H.

1968. A new species of carangid fish (Decapterus tabl) from the western Atlantic. Contrib. Mar. Sci., Univ. Texas Inst. Mar. Sci. 13:145-167.

BERRY, F. H.

1969. Elagatis bipinnulatus (Pisces: Carrangidae): Morphology of the fins and other characters. Copeia 3:454-463.

BERRY, F. H.

1971. Taxonomic status of western Atlantic clupeoid fishes. Proc. Symp. Invest. Resour. Caribb. Sea Adjacent Regions, FAO Fish. Rep. 71.2:1-8.

BERRY, F. H., and W. J. RICHARDS.

1973. Characters useful to the study of larval fishes. Proc. Workshop on larval fishes, Atlantic States Marine Fisheries Commission, Tech. Publ. 1:48-65.

BORKOWSKI, M. R., and J. R. GOULET Jr.

1971. Comparison of methods for interpolating oceanographic data.
Deep Sea Res. 18:269-274.

BROCK, V. E.

1962. Developing tropical Atlantic fishery through international research. Proc. 15th Annu. Sess. Gulf Caribb. Fish. Inst. 152-155

BROCK, V. E.

1963. The International Cooperative Investigations of the tropical Atlantic. Interagency Committee on Oceanography, Federal Council for Science and Technology, Pamphlet 11,A, 33-37.

BRUCKS, J. T.

1969. The currents east of the Windward Islands, West Indies. Abstr. Pap. Symp. Invest. Resourc. Caribb. Sea Adjacent Regions UNESCO/FAO:103.

BRUCKS, J. T.

1971. Currents of the Caribbean and adjacent regions as deduced from drift bottle studies. Bull Mar. Sci. 21(2):455-465.

BRUCKS, J. T.

1971. The currents east of the Windward Islands, West Indies. Symp. Invest. Resourc. Caribb. Sea Adjacent Reg. UNESCO/FAO Fish. Rep. 71.2:31-35.

BRUCKS, J. T., M. C. INGHAM, and T. D. LEMING.

1968. Oceanographic conditions in the northwestern Gulf of Guinea, 14 to 30 March 1965 (part of Geronimo Cruise 5) U. S. Fish Wildl. Serv., Data Rep. 27:48.

BRUCKS, J. T., M. C. INGHAM, and T. D. LEMING.

1968. Oceanic conditions off Sierra Leone 10 Feb. to 2 Mar. 1965 (part of Geronimo Cruise 5). U. S. Fish Wildl. Serv., Data Rep. 28:43.

COLLETTE, B. B., and L. N. CHAO.

1975. Systematics and morphology of the bonitos (Sarda) and their relatives (Scombridae, Sardini). Fish. Bull. 73(3):516-625.

COMMERCIAL FISHERIES REVIEW.

1963. Communications satellite assists oceanographers. Commer. Fish. Rev. 25(12):37-38.

COMMERCIAL FISHERIES REVIEW.

1963. Equalant II completed. Commer. Fish. Rev. 25(12):50.

COMMERCIAL FISHERIES REVIEW.

1964. Proposed plans for Equalant III. Commer. Fish. Rev. 26(4):46.

COMMERCIAL FISHERIES REVIEW.

1964. Bureau of Commercial Fisheries research vessel participate in Equalant III. Commer. Fish. Rev. 26(4):47-48.

COMMERCIAL FISHERIES REVIEW.

1964. Bureau of Commercial Fisheries research vessel Geronimo makes new discoveries. Commer. Fish. Rev. 26(7):24-25.

COMMERCIAL FISHERIES REVIEW.

1964. Results of the fishery-oceanographic studies in the Gulf of Guinea. Commer. Fish. Rev. 26(11):57.

COMMERCIAL FISHERIES REVIEW.

1965. Gulf of Guinea surveyed by research vessel Geronimo. Commer. Fish. Rev. 27(1):43.

COMMERCIAL FISHERIES REVIEW.

1965. Fourth expedition to the Gulf of Guinea completed by research vessel Geronimo. Commer. Fish. Rev. 27(7):41-42.

COMMERCIAL FISHERIES REVIEW.

1965. Gulf of Guinea survey continued. Commer. Fish. Rev. 27(10):54-56.

COMMERCIAL FISHERIES REVIEW.

1966. Tropical Atlantic fisheries investigations.
Commer. Fish. Rev. 28(4):38-41.

COMMERCIAL FISHERIES REVIEW.

1966. Tropical Atlantic fisheries investigations. Commer. Fish. Rev. 28(7):48-52.

COMMERCIAL FISHERIES REVIEW.

1966. Tropical Atlantic fisheries investigations.
Commer. Fish. Rev. 28(12):22.

COMMERCIAL FISHERIES REVIEW.

1967. BCF's Undaunted cooperates in fishery research.
Commer. Fish. Rev. 29(3):9.

COMMERCIAL FISHERIES REVIEW.

1967. Undaunted explores for tunas. Commer. Fish. Rev. 29(5):20-21.

COMMERCIAL FISHERIES REVIEW.

1967. Undaunted studies surface tunas and bait in western Caribbean.
Commer. Fish. Rev. 29(8-9):28-29

COMMERCIAL FISHERIES REVIEW.

1968. Bureau of Commercial Fisheries programs.
Commer. Fish. Rev. 30(7):23-26.

COMMERCIAL FISHERIES REVIEW.

1968. Undaunted receives satellite photos. Commer. Fish. Rev. 30(11):21.

COMMERCIAL FISHERIES REVIEW.

1969. Larval tuna fish reared for first time.
Commer. Fish. Rev. 31(6):7.

COMMERCIAL FISHERIES REVIEW.

1969. U. S. fishermen catch many tuna off west Africa.
Commer. Fish. Rev. 31(1):15.

COMMERCIAL FISHERIES REVIEW.

1969. Vast study of Atlantic east of Barbados starts in May. Commer. Fish. Rev. 31(4):11-14.

CORCORAN, E. F. and C. V. W. MAHNKEN.

1967. Productivity in the tropical Atlantic Ocean. Proc. Symp. Oceanog. Fish. Resour. Trop. Atl. FAO Fish. Rep. 51:43.

DRAGOVICH, A.

1970. The food of bluefin tuna Thunnus thynnus in the western North Atlantic Ocean. Trans. Am. Fish. Soc. 99(4):726-731.

DRAGOVICH, A.

1971. Food of skipjack tuna in the Caribbean Sea and adjacent oceanic waters. Proc. Symp. Invest. Resour. Caribbean Sea Adjacent Reg. UNESCO/FAO Fish. Rep. 71.2:27-40

COMMERCIAL FISHERIES REVIEW.

1968. Bureau of Commercial Fisheries programs.
Commer. Fish. Rev. 30(7):23-26.

COMMERCIAL FISHERIES REVIEW.

1968. Undaunted receives satellite photos. Commer. Fish. Rev. 30(11):21.

COMMERCIAL FISHERIES REVIEW.

1969. Larval tuna fish reared for first time.
Commer. Fish. Rev. 31(6):7.

COMMERCIAL FISHERIES REVIEW.

1969. U. S. fishermen catch many tuna off west Africa.
Commer. Fish. Rev. 31(1):15.

COMMERCIAL FISHERIES REVIEW.

1969. Vast study of Atlantic east of Barbados starts in May. Commer. Fish. Rev. 31(4):11-14.

CORCORAN, E. F. and C. V. W. MAHNKEN.

1967. Productivity in the tropical Atlantic Ocean. Proc. Symp. Oceanog. Fish. Resour. Trop. Atl. FAO Fish. Rep. 51:43.

DRAGOVICH, A.

1970. The food of bluefin tuna Thunnus thynnus in the western North Atlantic Ocean. Trans. Am. Fish. Soc. 99(4):726-731.

DRAGOVICH, A.

1971. Food of skipjack tuna in the Caribbean Sea and adjacent oceanic waters. Proc. Symp. Invest. Resour. Caribbean Sea Adjacent Reg. UNESCO/FAO Fish. Rep. 71.2:27-40

DRAGOVICH, A.

1972. The food of skipjack and yellowfin tunas in the Atlantic Ocean.
Fish. Bull. 68(3):445-460.

DRAGOVICH, A., and T. POTTHOFF.

1972. Comparative study of food of skipjack and yellowfin tuna off
the coast of west Africa. Fish. Bull. 70(4):1087-1109.

GOULET, J. R. Jr.

1968. Studies of the divergence of the South Equatorial Current of the
coast of Brazil. Abst. Pap. Symp. Invest. Resour. Caribb. Sea
Adjacent Reg. UNESCO/FAO:2.

GOULET, J. R. Jr.

1971. Currents off the eastern bulge of Brazil-preliminary report.
Proc. Symp. Invest. Resour. Caribb. Sea Adjacent Reg., UNESCO/FAO
Fish. Rep. 71.2:90-94.

GOULET, J. R. Jr., and M. C. INGHAM.

1968. Oceanic conditions in the northwestern Gulf of Guinea, Geronimo
Cruise 3, 10 February to 21 April 1964. U. S. Fish and Wildl. Serv.
Data Rep. 25:48.

GOULET, J. R., and M. C. INGHAM.

1971. The shallow layer of high salinity in the southwestern tropical
Atlantic. Bull. Mar. Sci. 21(3):716-732.

HOUDE, E. D. and W. J. RICHARDS.

1969. Rearing larval tunas in the laboratory. Commer. Fish. Rev.
31(12):32-34.

INGHAM, M. C.

1968. The "mixed layer" in the western tropical Atlantic Ocean.
Bull. Mar. Sci. 18(3):561-571.

INGHAM, M. C.

1970. Wind sea-surface temperature off Mauritania-Sierra Leone
Mar. Technol. Soc. J.4(4):55-57.

INGHAM, M. C.

1970. Coastal upwelling in the northwestern Gulf of Guinea.
Bull. Mar. Sci. 20(1):1-34.

INGHAM, M. C., J. R. GOULET, Jr., and J. T. BRUCKS.

1968. Oceanographic conditions in the northwestern Gulf of Guinea,
Geronimo Cruise 4, 5 August to 13 October 1964. U. S. Fish
Wildl. Serv., Data Rep. 26:50.

INGHAM, M. C., and C.V.W. MAHNKEN.

1966. Turbulence and productivity near St. Vincent Island, B. W. I.
Preliminary report. Caribb. J. Sci. 6(3-4):83-87.

IWAMOTO, T.

1966. The macrourid fish Cetonurus globiceps in the Gulf of
Mexico. Copeia 3:439-442.

IWAMOTO, T.

1970. Macrourid fishes of the Gulf of Guinea. Stud. Trop. Oceanog.,
Univ. Miami 4(2):316-431.

JONES, A. C.

1966. Tropical Atlantic tuna investigations, 1966. Proc. 19th Annu.
Sess. Gulf Caribb. Fish. Inst. p.100-107.

JONES, A. C.

1968. Food and drugs from the sea--sleeping giant or deceptive
illusion? Transactions: Conference on Industries future in the
ocean, Miami, Florida, 114-121.

JONES, A. C., and P. N. SUND.

1967. An aircraft and vessel survey of surface tuna schools in the Lesser Antilles. Commer. Fish. Rev. 29(3):41-45.

JOSSI, J. W.

1966. The ICITA Net -- Description and evaluation. Limnol. Oceanog. 11(4):640-642.

JOSSI, J. W.

1970. Annotated bibliography of zooplankton sampling devices. U. S. Fish Wildl. Serv., SSRF 609:90.

LEMING, T. D.

1968. Oceanographic studies in the Lesser Antillian Region: Turbulence west of the southern Lesser Antilles. Abst. Pap. Symp. Invest. Resour. Caribb. Sea Adjacent Reg., UNESCO/FAO:6.

LEMING, T. D.

1969. Eddies west of the southern Lesser Antilles. Abst. Pap. Invest. Resour. Caribb. Sea Adjacent Reg. UNESCO/FAO:102.

LEMING, T. D. and M.C. INGHAM.

1969. Oceanic conditions in the eastern Caribbean Sea and adjacent Atlantic, 6 August to 6 October 1965 (part of Geronimo Cruise 6) U. S. Fish Wildl. Serv., Data Rep. 33:34.

MAHNKEN, C. V. W.

- 1969 Primary organic production and zooplankton standing stock in the tropical Atlantic Ocean -- Equalant I and II. Bull. Mar. Sci. 19(3): 550-567.

MAHNKEN, C. V. W., J. W. JOSSI, and M. M. MCCABE.

1968. Biological conditions in the northwestern Gulf of Guinea, Geronimo Cruises 3, 4, and 5, February 1964 to March 1965. U. S. Fish Wildl. Serv., Data Rep. 30:50.

MAUGHAM, P. M. and B. J. CULVERHOUSE.

1970. Satellite automatic transmission system used aboard fishery research vessel. Ocean Ind.5:45-46.

MAUGHAM, P. M., M. C. INGHAM, and J. F. HEBARD.

1969. Feasibility of monitoring west African oceanic front from satellites. Commer. Fish. Rev.31(10):24-29.

MAZEIKA, P. A.

1967. Thermal domes in the eastern tropical Atlantic. Limnol. Oceanogr.12(3):537-539.

MAZEIKA, P. A.

1968. Some features of the Gulf Stream off Chesapeake Bay in the spring of 1963. Fish. Bull. 66(2):387-423.

MCCABE, M. M., and D. M. DEAN.

1970. Esterase polymorphisms in the skipjack tuna, Katsuwonus pelamis. Comp. Biochem. Physiol.34:671-681.

MILLER, G. C. and D. M. KENT.

1971. A redescription of Prionotus beani (Pisces, Triglidae). Quart. J. Fla. Acad. Sci.34(3):223-242.

MILLER, R. V.

1971. A new sciaenid fish (Pisces; Umbrini) with a single mental barbel, from the southern Caribbean. Copeia2:300-306.

POTTHOFF, T.

1969. Searching for tuna. Commer. Fish. Rev. 31(7):35-37.

RICHARDS, W. J.

1964. Comments on the distribution and abundance of larval scombrid fishes collected from the tropical Atlantic during Equalant I. Presented at the 27th Annual Meeting Amer. Soc. Limnol. Oceanog., June 1964, Miami Beach, Florida.

RICHARDS, W. J.

1966. Paraliparis wilsoni, a new liparid fish from the Gulf of Guinea. Proc. Biol. Soc. Wash. 79:171-174.

RICHARDS, W. J.

1968. Eastern Atlantic Triglidae (Pisces, Scorpaeniformes). Atlantide Rep. 10:77-115.

RICHARDS, W. J.

1969. An hypothesis on yellowfin tuna migrations in the eastern Gulf of Guinea. Cah. ORSTOM ser. Oceanogr. 7(3):3-7.

RICHARDS, W.J.

1969. Tropical Atlantic tuna larvae collected during Equalant surveys. Commer. Fish. Rev. 31(11):33-37.

RICHARDS, W. J.

1969. Distribution and relative abundance of larval tunas collected in the tropical Atlantic during Equalants I and II. Proc. Symp. Oceanog. Fish. Res. Trop. Atl., UNESCO/FAO:289-315.

RICHARDS, W. J.

1969. Elopoid leptocephali from Angolan waters. Copeia 3:515-518.

RICHARDS, W. J.

1973. Comments on the identification of larval scombrid fishes. Proc. of the Workshop on larval fishes, Atl. States Mar. Fish. Comm. Tech. Publ. 1:20-27.

RICHARDS, W. J., and W. L. KLAWE.

1972. Indexed bibliography of the eggs and young tunas and other scombrids (Pisces, Scombridae), 1880-1970. NOAA NMFS, SSRF 652:107.

RICHARDS, W. J., and G. R. LOVE.

1971. Internal development of young tunas of the genera Katsuwonus, Euthynnus, Auxis, and Thunnus (Pisces, Scombridae). Copeia 1:72-78.

RICHARDS, W. J., B. J. PALKO, and E. SCOTT.

1968. A research aquarium suitable for shipboard use. Trans. Am. Fish. Soc. 97(3):268-287.

RICHARDS, W. J., and J. E. RANDALL.

1967. First Atlantic records of the narrow-corseleted frigate mackerel, Auxis thazard. Copeia 1:245-247.

RICHARDS, W. J., and D. C. SIMMONS.

1971. Distribution of tuna larvae (Pisces, Scombridae) in the northwestern Gulf of Guinea and off Sierra Leone. Fish. Bull. 69(3):555-568.

RICHARDS, W. J., D. C. SIMMONS, A. JENSEN, and W. C. MANN.

1969. Tuna larvae (Pisces, Scombridae) collected in the northwestern Gulf of Guinea, Geronimo Cruise 3, 10 February to 26 April 1964. U. S. Fish Wildl. Serv., Data Rep. 36:19.

RICHARDS, W. J., D. C. SIMMONS, A. JENSEN, and W. C. MANN.

1969. Tuna larvae (Pisces, Scombridae) collected in the northwestern Gulf of Guinea, Geronimo Cruise 4, 24 July to 13 October 1964. U. S. Fish Wildl. Serv., Data Rep. 31:17.

RICHARDS, W. J., D. C. SIMMONS, A. JENSEN, and W.C.MANN.

1970. Tuna larvae (Pisces, Scombridae) collected in the northwestern Gulf of Guinea and off Sierra Leone, Geronimo Cruise 5, 10 February to 19 April 1965. U. S. Fish Wildl. Serv., Data Rep. 40:24.

RICHARDS, W. J. and J. P. WISE.

1969. Biology and fisheries of large scombrid fishes of northwest Africa. Proc. Symp. on the Living Resources of the African Continental Shelf from the Straits of Gibraltar to Cape Verde, ICES/FAO, Fish. Rep. 58:60.

RINKEL, M. O., P. N. SUND, and G. NEUMANN.

1966. The location of the termination area of the equatorial equatorial undercurrent in the Gulf of Guinea, based on observations during Equalant III. J. Geophys. Res. 71(16): 3893-3901.
